

Shreveport Geological Society 2010 Field Trip

This year we will go spend the day in Magnet Cove, Arkansas. Our tour guide Mike Howard has promised rare mineral collecting and a thorough explanation of the regions unique geological setting. Car-pooling on site is a requirement. We can all meet near our destination then gather together from there as we follow Mike through our tour.

The trip is about 3 hours one way. We would meet at approximately 10 AM, tour a few sites then go to a world class BBQ place for lunch.

An optional second day of the trip will take us through Hot Springs National Park, tour the town, shop in the town's antique stores, or go directly to the Crater of Diamonds State Park.

Now, we are needing a headcount ASAP to organize this trip. We need at least 10 people confirmed to make the plans. Hotel accommodations for second day are on an individual basis, we can give recommendations though.

This field trip can either take place on Friday April 16th, or Friday May 7th.

Please send a simple email with "Field Trip" as the subject to zach@willdrill.com with your preferred date if you plan on going, also with your preference of optional second day activities. Whichever date and activity gets the most votes will be the one we choose.

More details coming upon confirmed head count.
